

PARTNERSHIP

Introduction

FORM-SARVISION is a Partnership between the forestry consultant company FORM International and the remote sensing company SARVISION, leading expert in RADAR technology for forestry and crop monitoring (liaised to Wageningen University). It is the combination of expertise that makes this Partnership powerful and unique.

COMBINED EXPERTISE

And tailored products

FORM and SARVISION have a well established know-how and practical experience in Sustainable Forest Management and applied Remote Sensing technology. Our joint expertise has lead to the successful implementation of projects. Key experiences are:

- Products that are tailored to specific client needs.
- Straight forward and concrete solutions for complex issues.
- Innovative in technical methods and approaches.
- Fast data processing, at any time for any area.

COST EFFECTIVE

And accurate monitoring

The RADAR technology that we use, enables us to deliver robust monitoring products at short notice: Even the most cloudy, remote and large areas in tropical countries can be monitored without periodical constraints. Because of the fast data retrieval and - processing, the costs for our products are considerably low compared to extensive field missions (GPS-measurements, inventories): A small team of experts can do the job. Our forestry consultants verify the situation in the field after the satellite data is processed. This crucial step enables FORM-SARVISION to deliver accurate and reliable products to our clients.

TRANSPARENCY

And independence

There is a growing international demand for transparent and independent monitoring by governments, investment funds and organisations involved Climate Change issues or Biofuels. FORM-SARVISION provides monitoring products that are of guaranteed independence. Our monitoring methodologies are transparent, scientifically solid and internationally acknowledged.

OUR PRODUCTS

And services

FORM-SARVISION is able to deliver a variety of products and services. We monitor forest concessions, timber plantations and industrial plantations such as coffee, oil palm, cocoa and rubber. FORM-SARVISION also carried out projects for 'best-area selections' for the establishment of biofuel plantations. Various commercial companies, investment funds and international renowned conservation agencies have requested our monitoring services. FORM-SARVISION is acquainted with the issues that organisations in the field deal with and is able to translate a query to a reliable and concrete answer.

Our specialists will be happy to inform you about our products and the services that we can offer to your organisation.
